

Senior Engineer - Perth

Leading Construction Industry Company Variety of Major Construction Projects

Are you a Civil, Structural or Mechanical Engineer looking to establish a solid and broad-based career in design with a highly regarded international company? Are you looking for a job with real variety and fresh, wide-ranging challenges? Would you like to be treated as an individual in a small close knit team and not just one of the masses in a large impersonal corporate conglomerate? If you answered Yes to the above then read on...

As the successful Engineer for this position you will be responsible for designing a wide range of diverse and complex structures, and your role will provide a variety of interesting work in both the commercial and civil engineering environments within Western Australia. This is not a boring job where each day is the same! Your role as our Design Office Manager will see you work with our sales team and customers to develop winning solutions and managing a small, skilled design team while working on a wide variety of projects such as:

- Bridges
- Mining infrastructure
- Waste water treatment plants
- Commercial and building projects
- The full range of major civil works

In return, you will require a recognised degree in Civil, Mechanical or Structural Engineering and have good management, communication, lateral thinking & problem solving skills. It is not essential, but ideally you will have post-graduate experience in the Australian construction industry, on site experience & a good working knowledge of AutoCAD.

We will reward the suitable applicant with a competitive salary package, a great working environment with plenty of variety and training in our products & systems. Our Malaga branch is located an easy 20 minutes from Perth with ample parking, good facilities and a great fun and team spirit.
